Erik Hollnagel

Purpose:

To build **Artificial Intelligence**
using FRAM

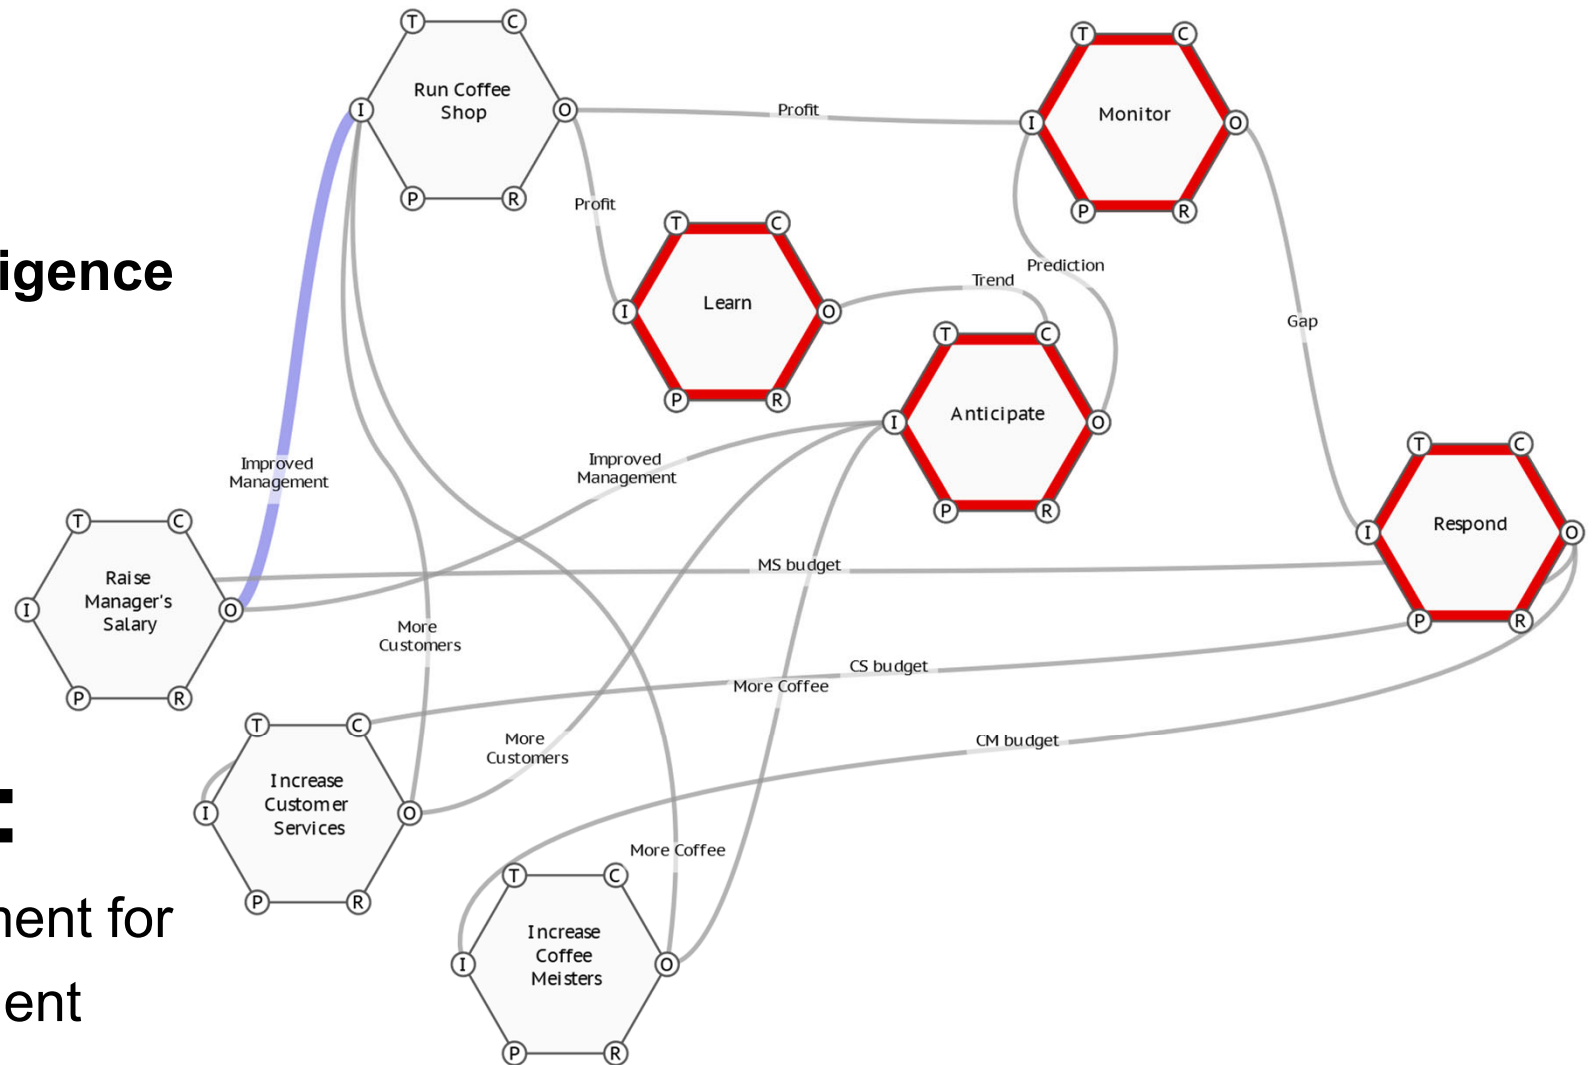

Purpose:

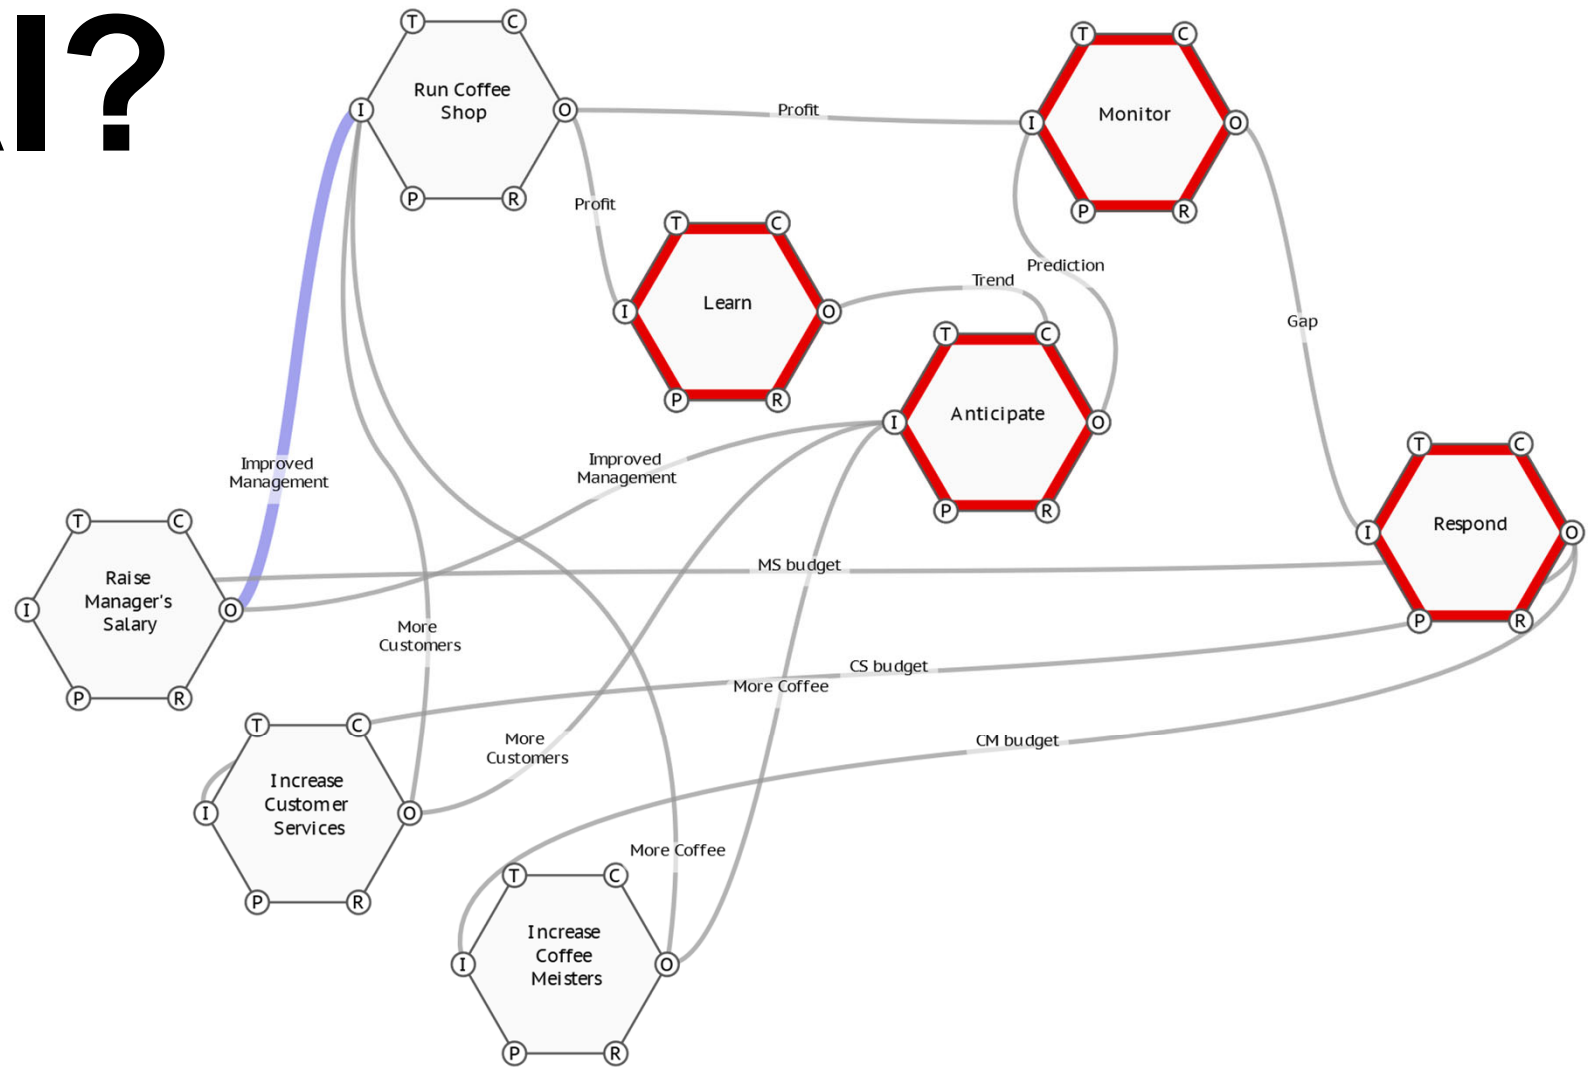

To build **Artificial Intelligence** using FRAM

Application:

Optimization of Investment for Coffee Shop Management

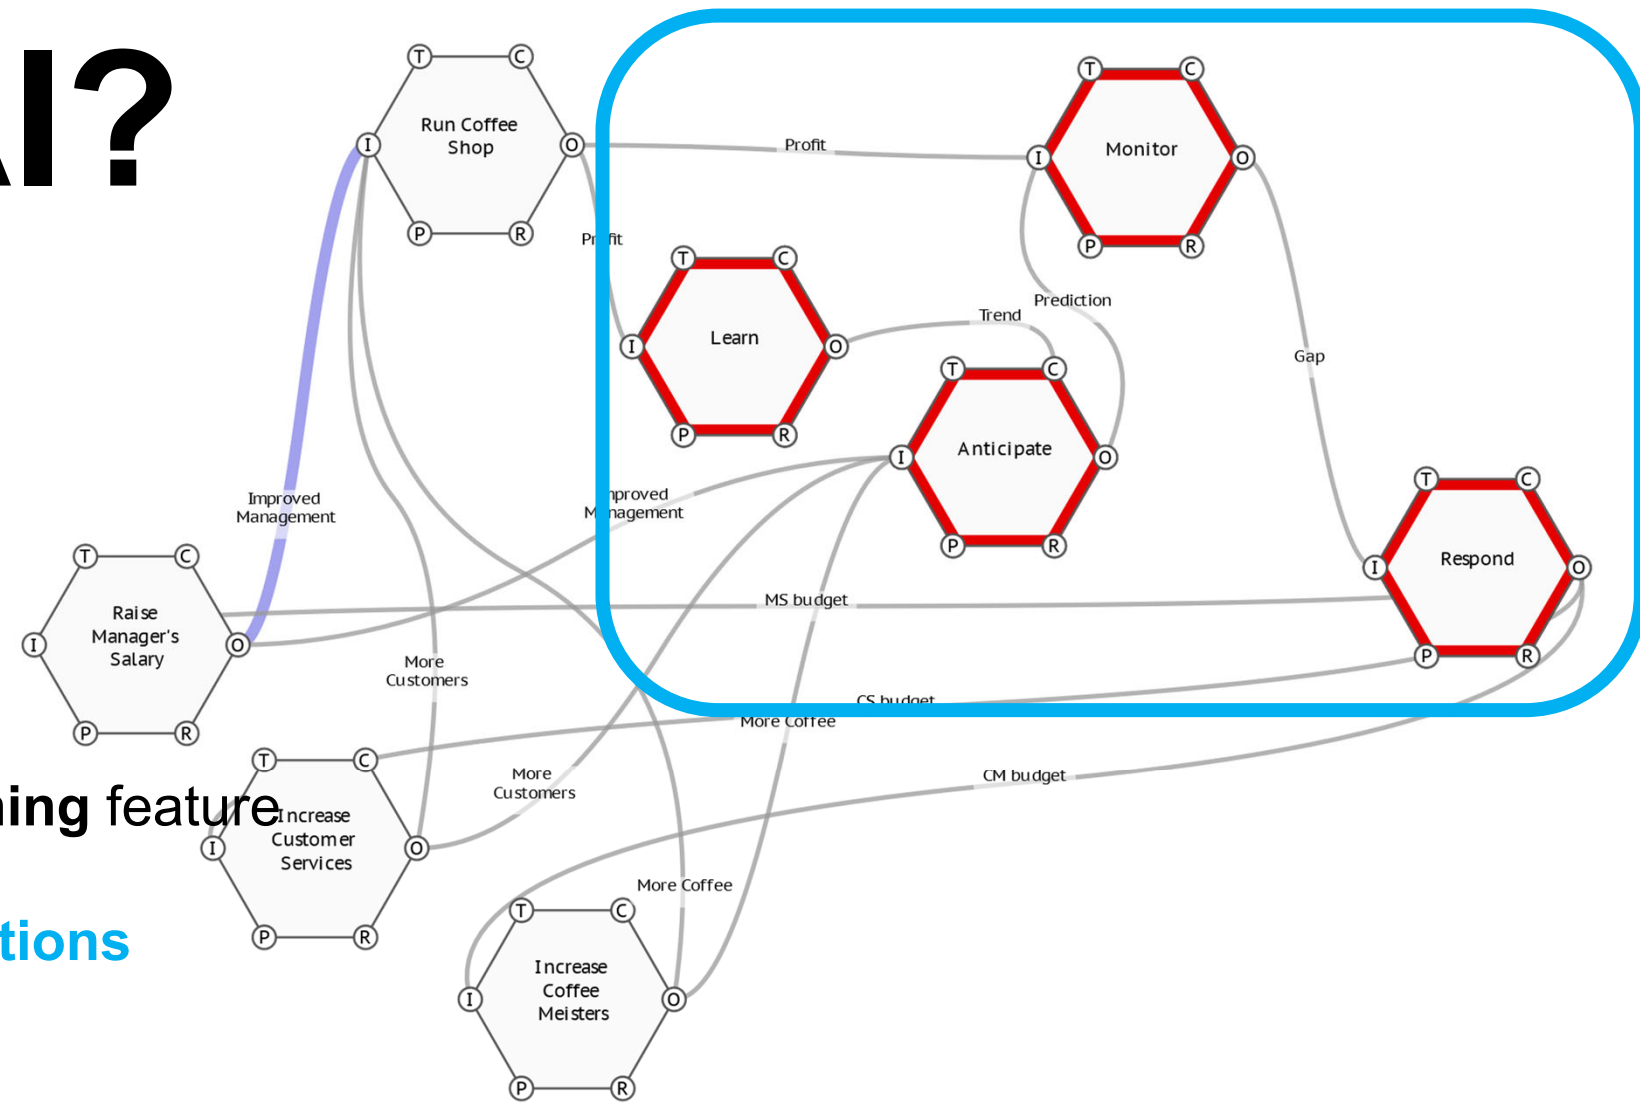

Why AI?

Why AI?

Because

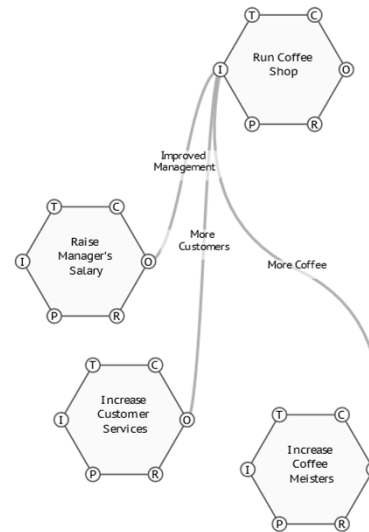

Adding **Machine Learning** feature
=
Adding **Resilient Functions**

How to build AI by FRAM

How to build AI by FRAM

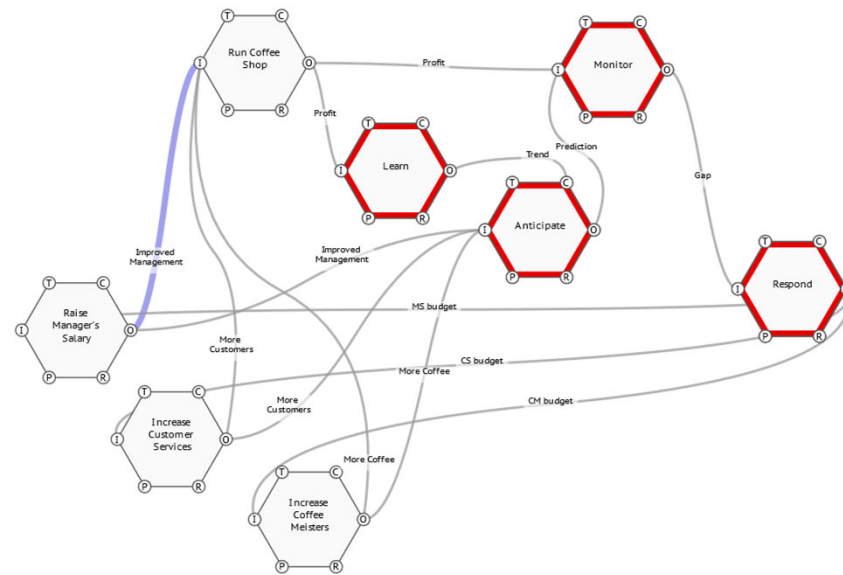

Stage 1: Build Domain Specific Part

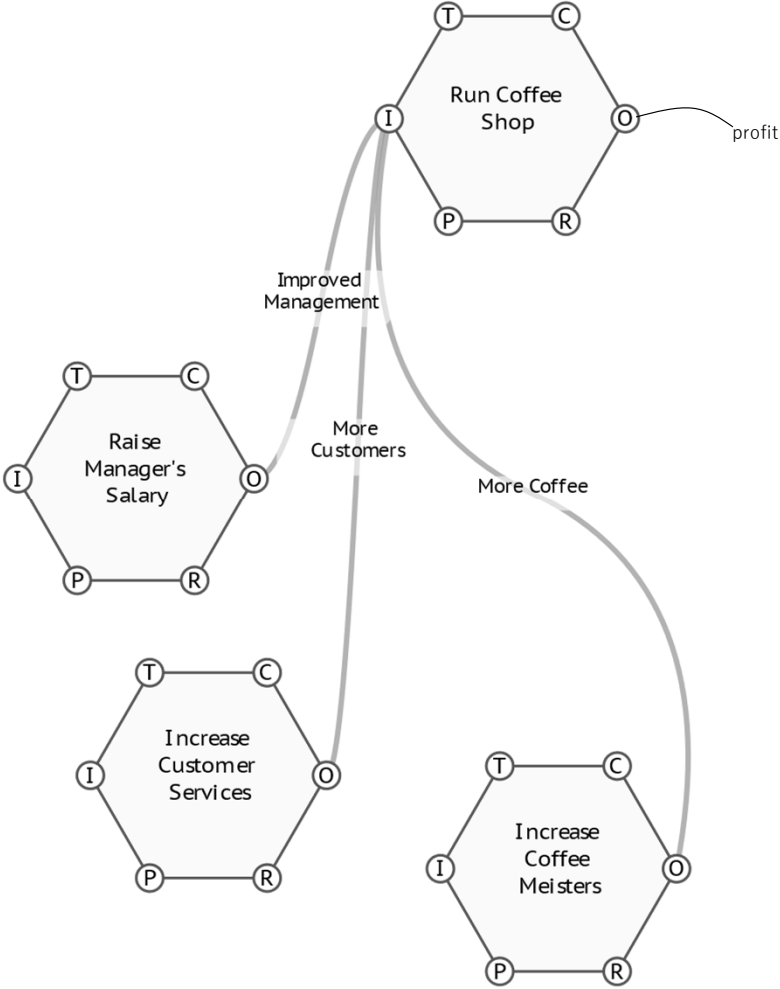

How to build AI by FRAM

Stage 1: Build Domain Specific Part

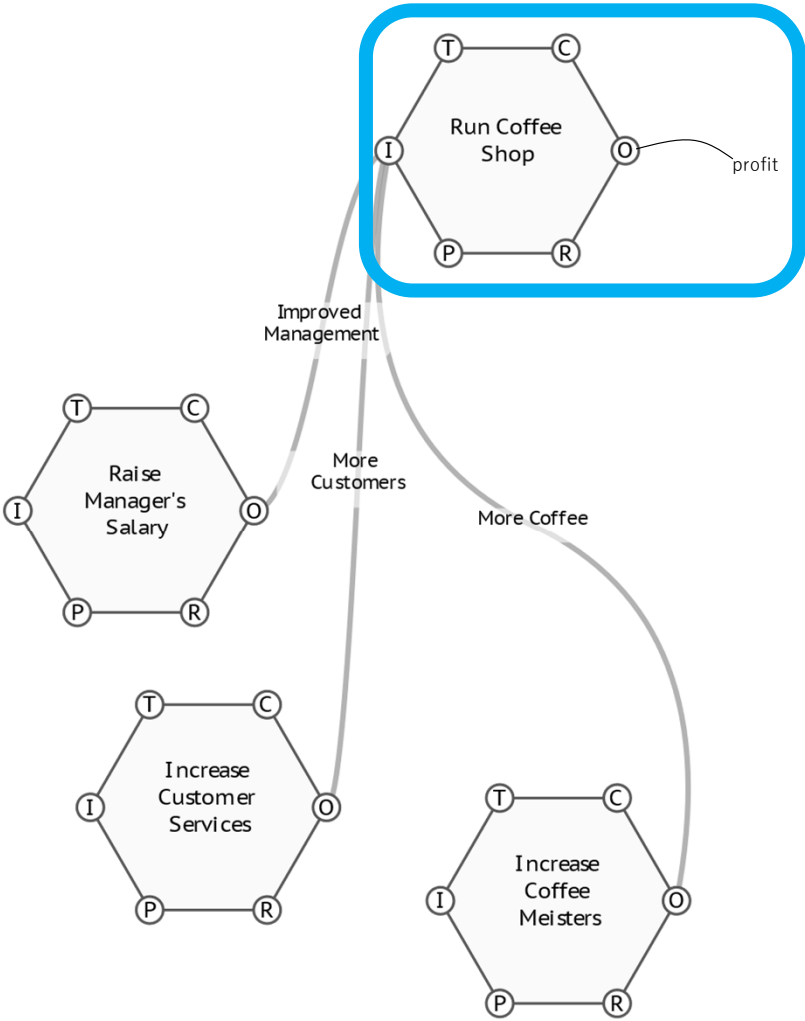

Stage 2: Add Machine Learning Feature

Stage 1: Build Domain Specific Part

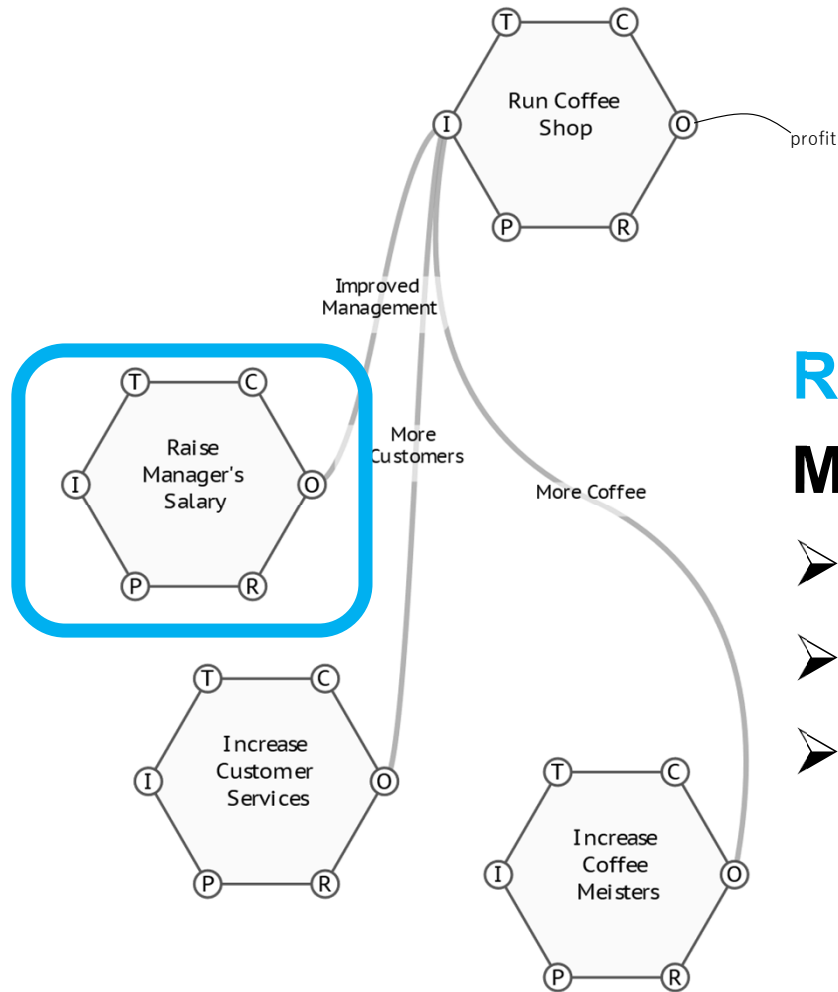

Stage 1: Build Domain Specific Part

Run Coffee Shop

- Input 3 types of investments.
- Produce profit.

Stage 1: Build Domain Specific Part

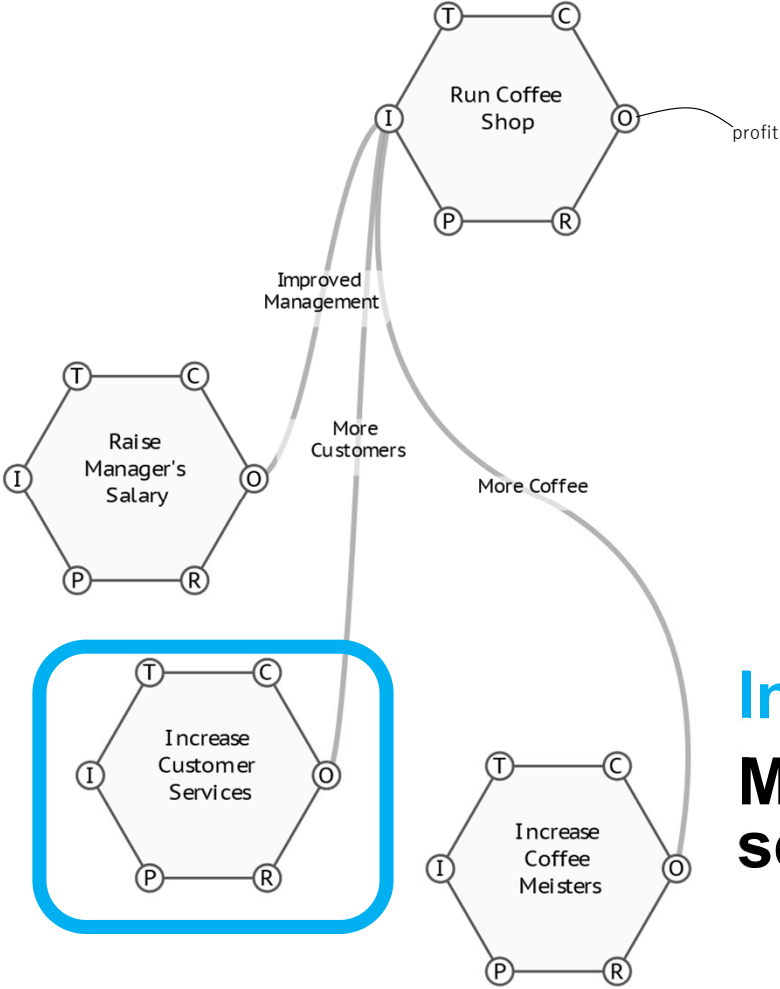

Raise Manager's Salary (MS)

More MS for:

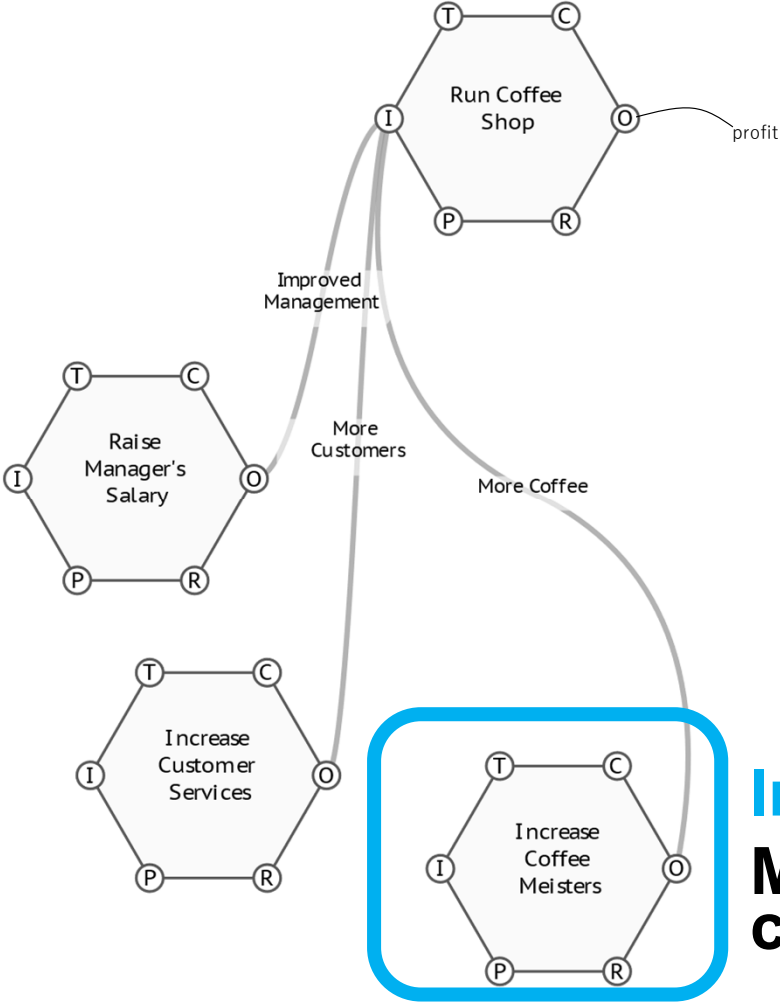

- Better Marketing
- Better Advertisement
- Shop Interior Improvement

Stage 1: Build Domain Specific Part

Increase Customer Services (CS)
More CS personnels for better services

Stage 1: Build Domain Specific Part

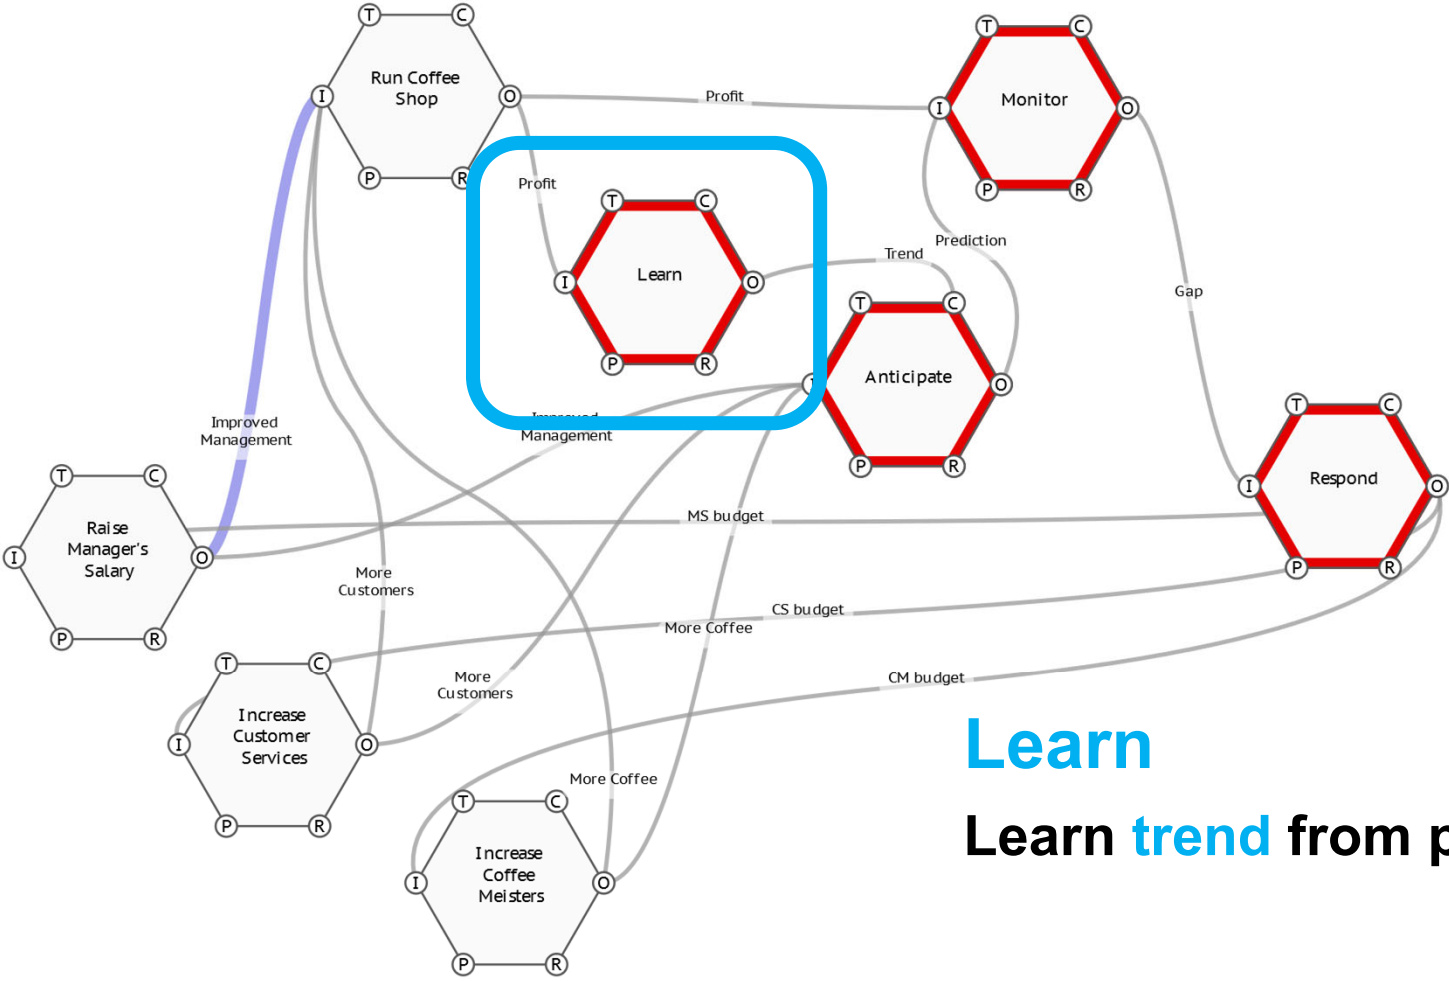

Increase Coffee Meisters (CM)
More CM for more coffee and customer satisfaction

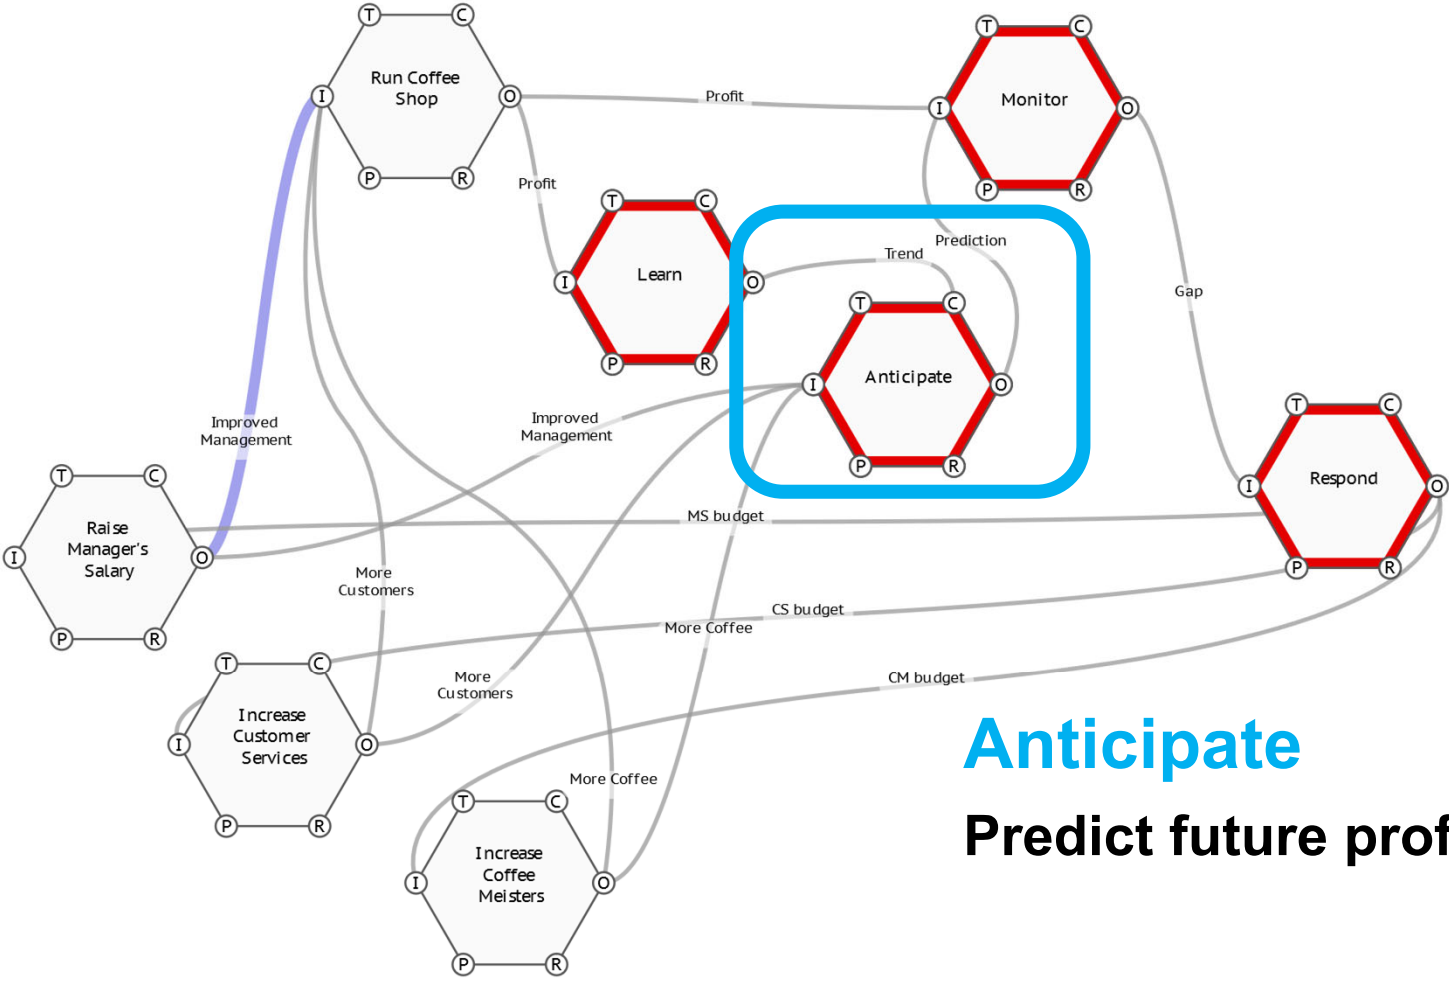

Stage 2: Add Machine Learning Feature

Stage 2: Add Machine Learning Feature

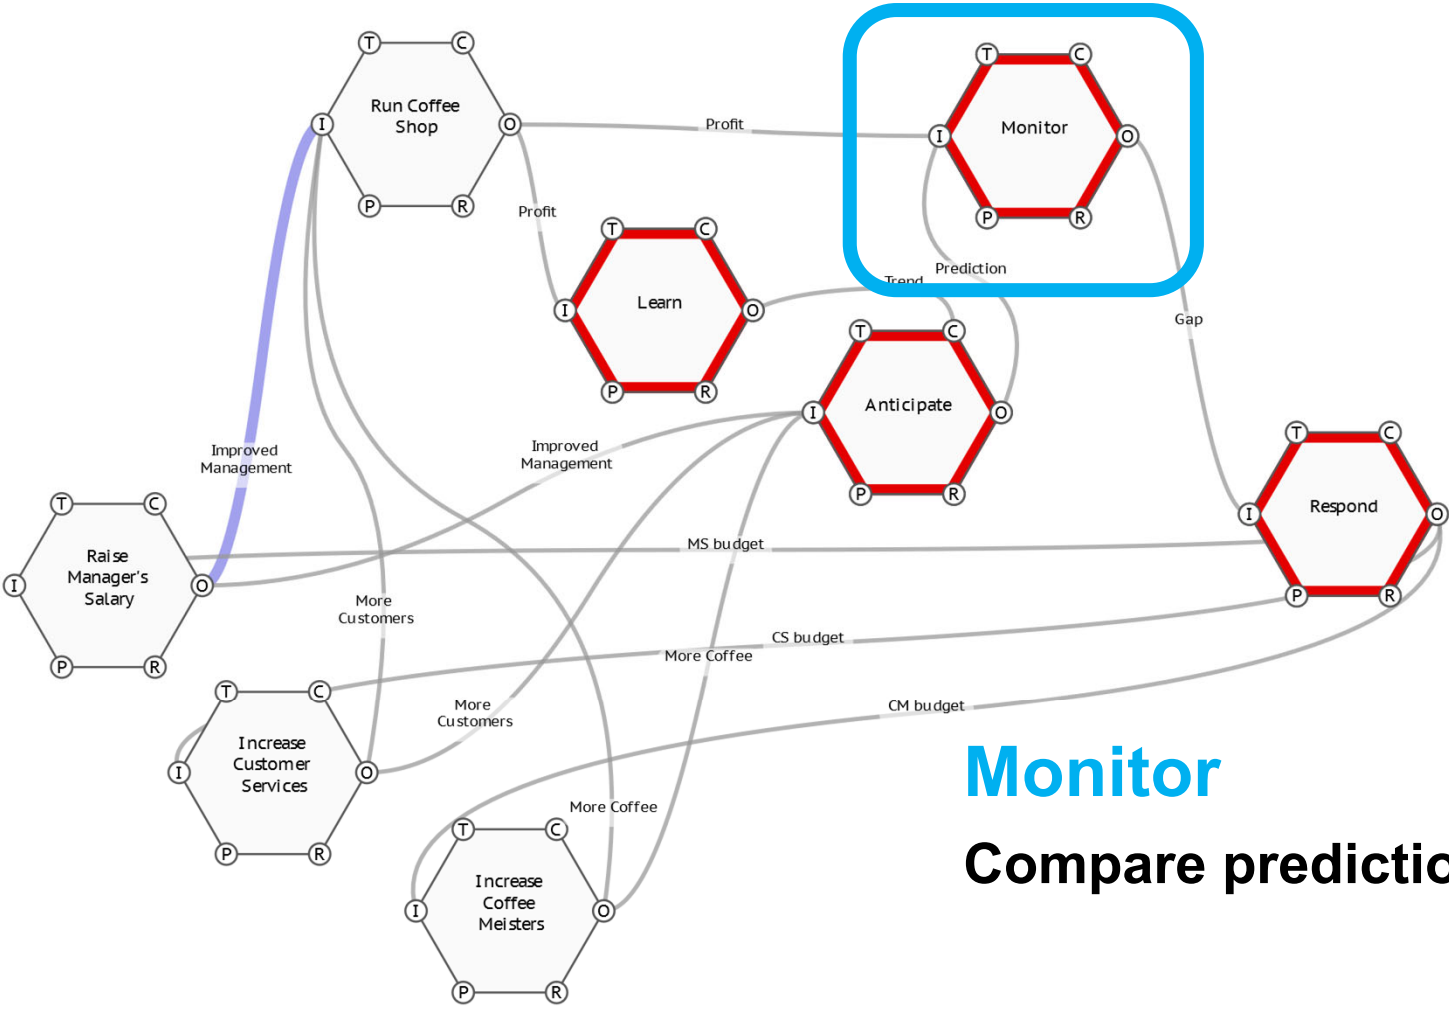

Stage 2: Add Machine Learning Feature

Anticipate

Predict future profit from current Investments.

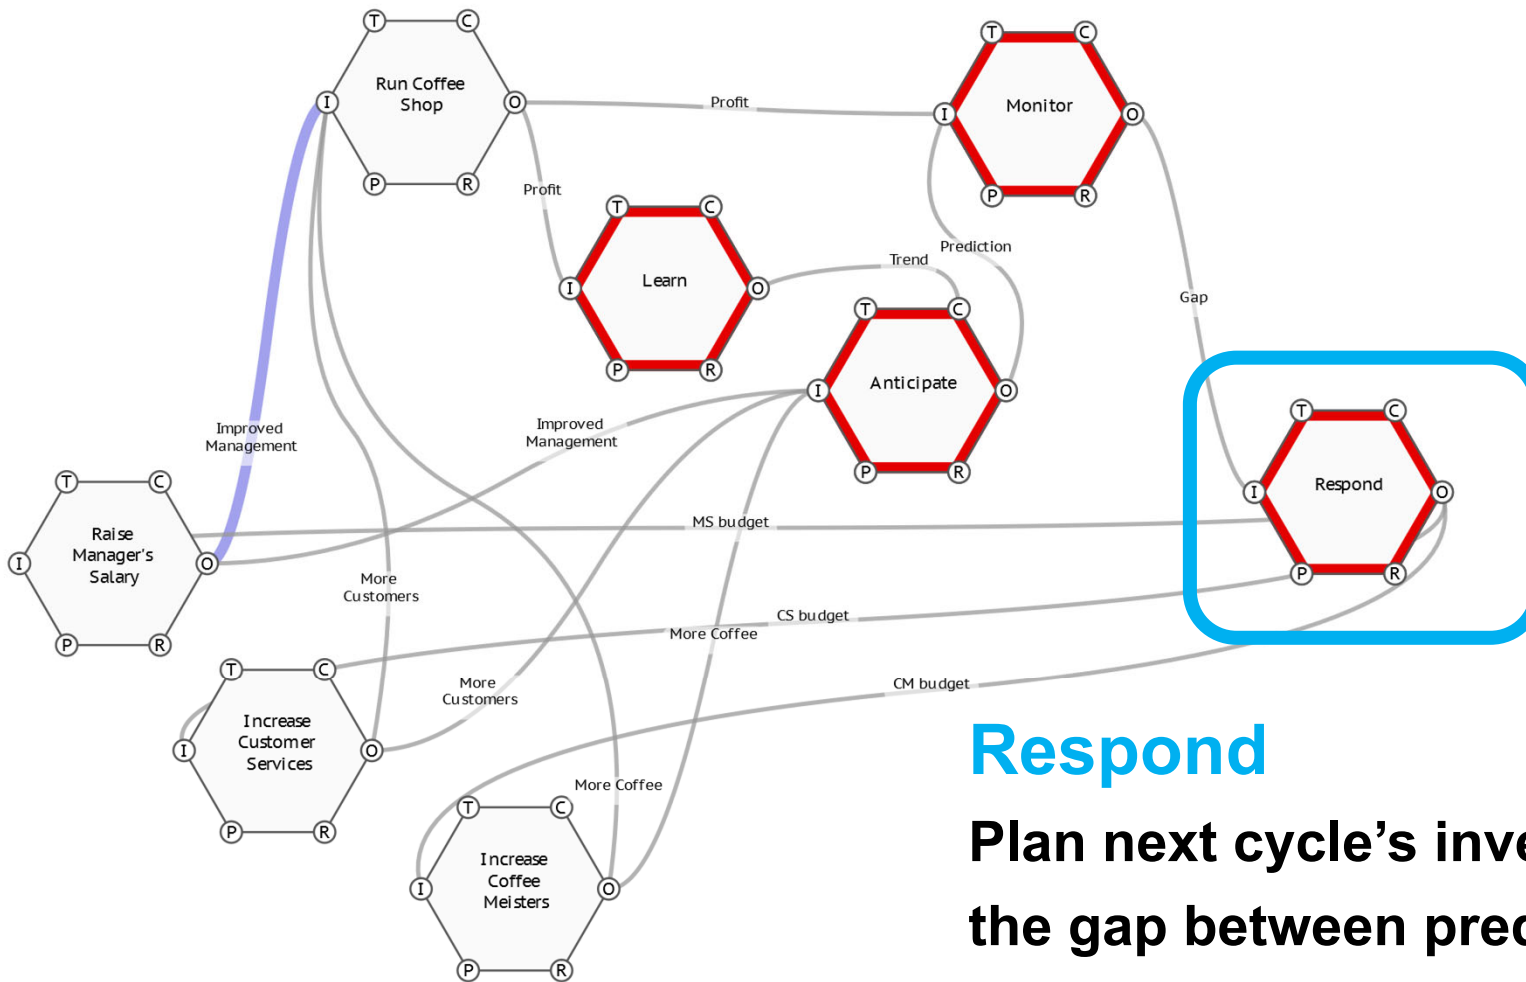

Stage 2: Add Machine Learning Feature

Monitor

Compare prediction and the actual profit.

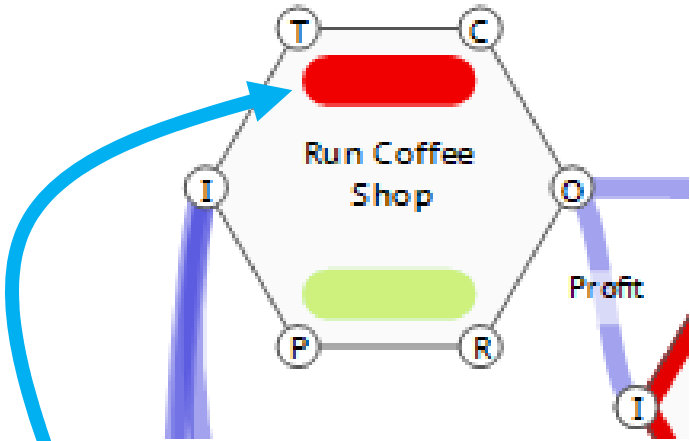

Stage 2: Add Machine Learning Feature

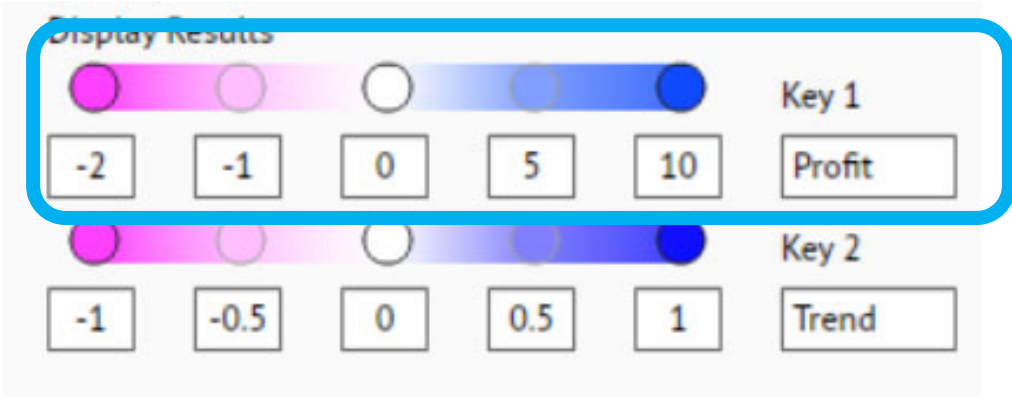

Respond

Plan next cycle's investments to compensate the gap between prediction and actual profit.

System Performance Indicator

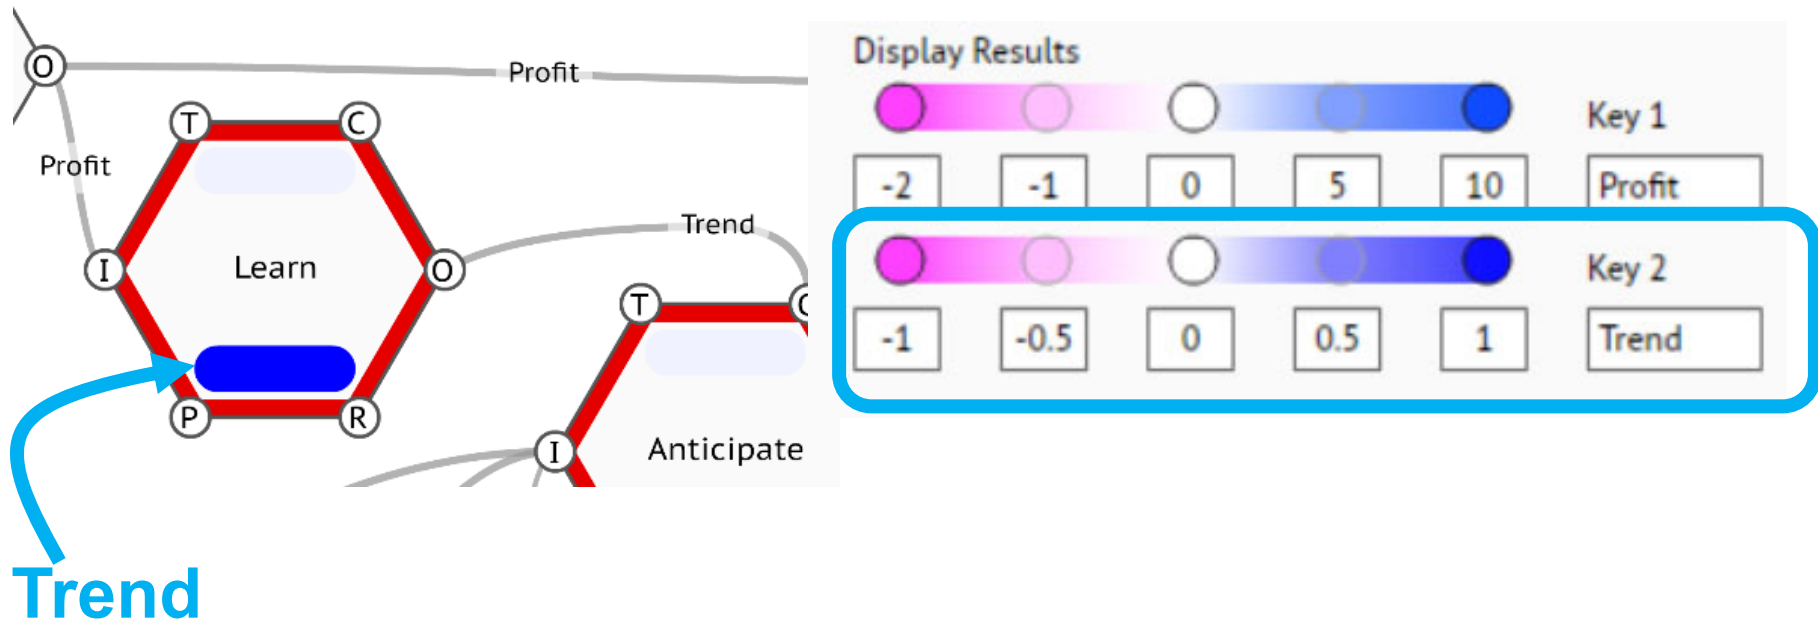

Profit

“Profit” is shown by upper color to check system performance. Blue color means positive profit.

Learning Convergence indicator

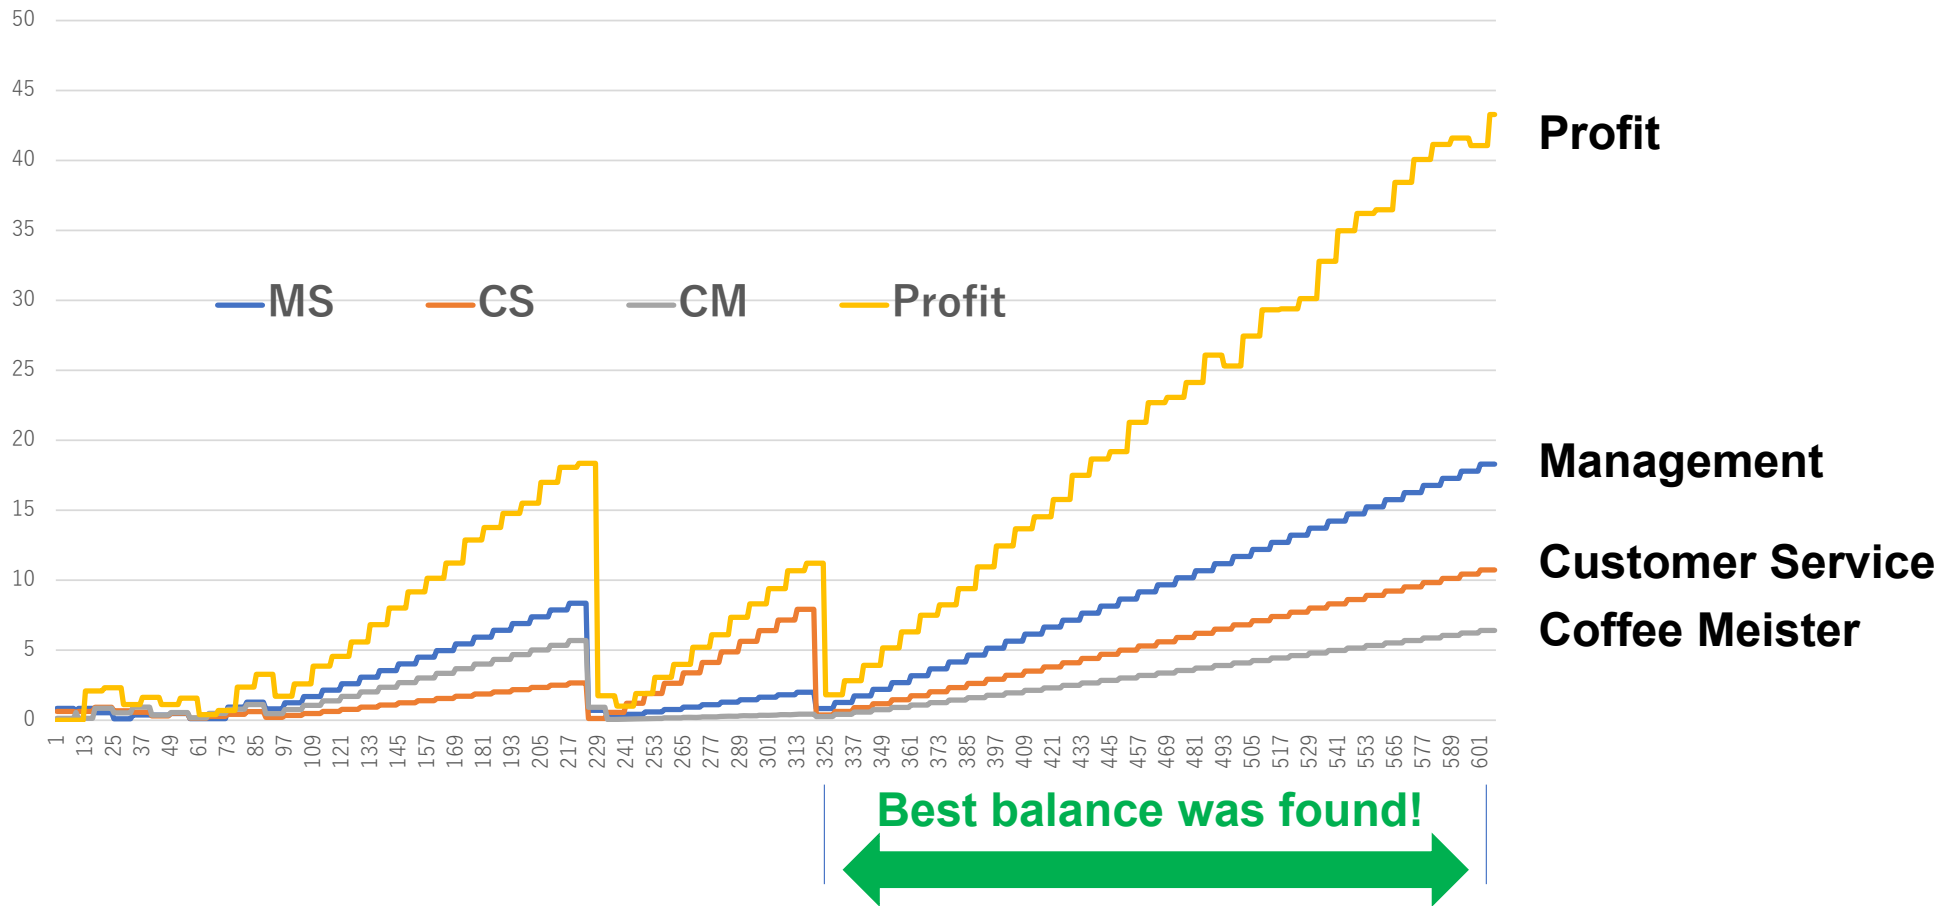

“Trend” is shown by lower color to check convergence.

White color means profit has reached to high level in steady state (low gradient).

Demo

Result

Success Factor

- Try & Error of setting a parameter “**prediction rate**” in “Anticipate” function was found to be the key for good convergence.

Profit Prediction = (Total Investments) * 1.1

Conclusion

- Adding Machine Learning feature is **equivalent to adding Resilience feature** to the system.
- Your FRAM model becomes a **quantitative success factor finding machine**.
